February 6, 2004 – EDC 077
February 18, 2004 – EDC 078
February 19, 2004 – EDC 078
February 20, 2004 – EDC 077

Course Description

As a health professional or administrator, learn how to enhance your delivery of healthcare services through leading edge technologies and best practices in information and knowledge management. Explore different types of information systems in healthcare and their applications for supporting clinical care and administration. To maximize your role in the emerging field of Health Informatics, explore new ideas and strategies for implementing clinical applications, and using electronic health records and decision support systems in healthcare.
